**DETAILED ACTION**

***Allowable Subject Matter***

Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art taken alone or in combination fails to anticipate or fairly suggest the limitations of the claims, in such a manner that a rejection under 35 USC 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claim 1.

Specifically regarding claim 1, Zhao et al. (20020176650) teaches for example, an all-optical switch using carbon nanotubes.

But, Zhao et al. (20020176650) fails to explicitly teach an optical switching system comprising; a light control portion irradiated with a signal light composed light pulse train; a control light applying unit that applies a pulse-like control of light synchronized with the signal light to the light control portion to selectively transmit the light pulse train within the signal light to form an output signal light; a clock extracting unit that synchronizes the control light applied by the control light applying unit with the signal light; and a signal detecting unit that receives the output signal light, wherein the light control portion is composed of a thin film made carbon nanotubes, as claimed.

Specifically regarding claim 1, Andrieux et al. (6384960) teaches the state of the art of limitation of luminous flux, including a liquid or solid medium containing carbon nanotubes.
